

Stephen,

Here are some letters from some of my students. They e-mailed me and I pasted them on to one note for you.

Thanks again,

Taylor Road Middle School - Science

I learned plenty at the telescope demo we did like there are certain type of telescopes see the sun in different colors. I hope you come back to our school.

Hey thanks for coming in to our school to tell us about the sun and letting our grade see the sun through a special telescope. I learned that you should not look through a regular telescope at the sun or it will do permanent damage to your eye. So thanks again for coming in to your school.

Thank you so much for coming and teaching me about astronomy. If you hadn't come and told me that I wasn't a loud to look at the sun with a normal telescope I would be blind right now.

Thank you for coming to our school I learned more about space in one class period than in a whole week at school.

Thank you so much for coming to show us the telescopes. It was really cool to look at the sun.

Thank You so much for coming to our school to teach us so much about the sun and stars. I liked how I learned how when Solar Flares come out of the sun they come right back in to the sun like a tennis ball thrown against a wall. Thank You sooooo much again and I hope you will come back to our school to teach us more.

Thank you so much for coming and showing us all about telescopes. I learned that if you are at home and you look at the sun through a telescope you will go blind I also learned that those telescopes were more than thousands of dollars! thanks again,

Thanks so much for taking the time to teach us about space. I liked your encouragement and influence on us that you were just a kid and became interested in astronomy!! I really appreciate it!!

Thank you so much for coming to Taylor Road to teach us about our sun, the solar system and telescopes. I never knew about solar flares or about how it takes 8 min. for the sun's heat to reach us.
Thanks-

THANK YOU FOR COMING TO OUR SCHOOL!!!! I learned about the red spots on the sun. I have never looked through a Telescope before. THANK YOU FOR COMING AGAIN!!

That was lots of fun! I learned that the sun was really a star (I didn't know that). You turned really boring stuff into this amazing new subject.

Thanks,

I think those telescopes were totally worth the money. The different layers of the sun were amazing. The fact that you could actually see the sun and outer space in the background was freaky. Thank

Sincerely,

Here is the message I would like to send to the science guy!

Thank you so much for coming out to our school!!! I really LOVE science and this was an amazing opportunity for me to understand the sun that much more!! Everything was fascinating and I really hope that you can come again and teach us some more. (Also, for my dream job, I want to become a scientist and study astronomy, marine biology, or the Bermuda Triangle!) Thanks again,

Thank you SO much for coming in and showing us the telescopes! I learned that they are all different types of telescopes!!!

Thank you for coming to our school and teaching us about space and astronomy. My favorite part was looking into the telescope. I learned that it takes 8.3 seconds for the sun's rays to reach the Earth. Also, I learned that when we are looking through the telescope and we see the sun we see what happened about 8 minutes ago. I hope you come again to teach us more!

Dear Mr. Telescope guy

I have learned much from you. Like you I also love to study the universe and to watch the show universe. Thank for teaching us about the sun.

Thank you so much for coming to our school! I have never actually looked into outer space before! Thanks

Thank you so much for showing us those telescopes! I thought it was really cool! =)

Thank you for coming to our school and teaching everyone about the sun. It was very cool and my favorite part was looking through the telescopes and seeing the sun in five or four colors. I hope you come back and teach us more about science. Something I found interesting was that when you look through the telescopes you are actually looking 8 minutes before time. This is from

Thank you so much for discovering my passion for astronomy. I never thought it could be so fascinating. I want you to know that I, Jake Baba, will be on that spaceship to Mars in 15 years, you can bet on that.

Thank you so much for the wonderful explanation of telescopes and the sun. I have really appreciated it and am interested in the Milky Way; I hope to one day become a scientist and study time and space.

I was especially interested in the fact that if we were on the sun and looking down to earth that we would be seeing about 8 minutes in the past, which opens my eyes to the possibilities of time travel.

Thanks For coming to our school to help us learn about all the amazing things about science. I want to be a scientist and go up in space one day too. It was really cool, and I hope that you will come again and present something different....THANKS AGAIN:]

Thank you so much for coming out to my school and teaching me about the sun and telescopes. I learned so much, one thing that I learned was that the sun was the closest star to earth. I also learned that not everyone can see the fire coming off the sun because of the color of their eyes. You're a cool dude!!:)

Thank you so much for giving us that educated presentation on astronomy!
That was an amazing experience! Thanks again!
(2nd period)

thank you for coming to our school and teaching us about astronomy. i probably will never get another chance to look through a cool telescope like the two that you brought. they were much better than mine. i never knew that the sun is not yellow when you look in a telescope. i thought the pictures you gave to my teacher were really cool. i guess they call Mars the "red planet " for nothing since it is actually tannish brown. thank you so much for coming! come again!

Thank you for letting us the different ways to see the sun. I enjoyed it a lot! I hope we will see you again! 😊

Dear Stephen,

Thank you so much for coming to our school yesterday and letting us look in your telescopes. I thought it was cool that we got to see a solar flare, do you see them often? Thank you for teaching me that light takes 8 minutes to reach the Earth from the Sun, that different colored eyes can see different things and that the sun has explosions and liquid from the explosions can go on and on or they can arch back into the sun.

Thanks again,

Mrs. M's Student

Thank you for coming to TRMS to let us look at the sun. I learned that there is calcium in the sun. I also learned that it takes about eight minutes for the light of the sun to get to the Earth. I had a lot of fun.

Thanks for showing us the sun. I learned a lot of things about the sun. I didn't really like science before, but you got me interested in science. Now science is my favorite subject. Thanks for making me interested in science.

thank you,

Thanks for coming out to Taylor Road to show us about science. I now know more about the sun than I did before, it was really nice of you. Hope you can come again and show us more stuff of the solar system. Thanks again.

Dear astronomer from NASA,

I really appreciated you coming to our school and talking about the sun. You explained many facts about the sun that I did not know. The telescopes were also really cool. Thank you for telling us about the sun.

Thank you so much for helping out on Monday. I really appreciate it. I learned a lot of things such as solar flares, and that there are different telescopes for every shape/color of the sun.

Thanks again,
